

# Some manual modifications in improving Latex file's quality

Duong Do

July 26<sup>th</sup> 2016

## 1. Header and Footer

Because there is only one template, the content of header and footer is fixed. For any change of the header and footer go to this latex file and have changes by yourself.

## 2. Special charater

The process of converting sometimes results on generating special characters such as Åå, which make the file cannot run. The simple fix is go to the latex file and delete this special character.

## 3. Sapce and break

The process of converting sometimes did not generate space and break as you expected. Come to your file and add any space if you want.

## 4. Image

For special image with floating, we encourage you to take a look at *Mini-page Latex* for full explanation.

## 5. Table

If you want any change instead of using built-in package, we encourage you to take a look at *Table Latex* for full explanation.
